

Color Grabber for macOS

A lightweight, native macOS menu bar application to extract colors from images, your clipboard, or directly from your screen. Built with Python and `pywebview`.

Color Grabber Screenshot

Features

- **Native Menu Bar Integration:** Lives quietly in your macOS menu bar for quick access.
- **Multiple Sources:** Upload images, paste screenshots directly from your clipboard (`Cmd+V`), or use the native Screen Picker.
- **Precision Magnifier:** A hover magnifier with a crosshair allows you to target the exact pixel you need.
- **Interactive Color Wheel:** Dynamically select shades, tints, and primary hues.
- **One-Click Copy:** Instantly copy colors to your clipboard in `HEX` , `RGB` , `RGBA` , or Flutter-ready `ARGB` formats.

Getting Started

Prerequisites

- macOS
- Python 3.14+
- [uv](#)

Local Development

(1) Clone the repository:

```
git clone git@github.com:IsraTech-Software/MacOS-Color-Picker.git
cd color-grabber
```

(1) Install dependencies:

```
uv sync
```

(1) Run the app

```
uv run python color_grabber.py
```

Look for the icon in your top menu bar!

Building for Production

This project includes a GitHub Actions CI/CD pipeline that automatically compiles a bundled macOS `.app` using PyInstaller on every push to `main` or `develop`. You can download the compiled `.zip` from the GitHub Actions Artifacts tab.

To build the standalone `.app` bundle locally:

```
uv run pyinstaller --name "ColorGrabber" \
    --windowed \
    --noconsole \
    --add-data "standalone.html:." \
    color_grabber.py
```

The compiled macOS application will be available in the `dist/` directory.
